

Inpatient Rehabilitation Facility Quality Reporting Program (IRF QRP) Technical Specifications for Reporting Assessment-Based Measures for IRF-PAI 1.4 and 1.5

The purpose of the tables below is to list items necessary to calculate the IRF QRP assessment-based measures, which will be used for compliance determination, and items used only for risk adjustment, which will not be used for compliance determination.

- **Table 1** includes items that are necessary to calculate the measures, including exclusion criteria, and items used for validation of the measures. These items are indicated with an 'x'. These items are necessary to calculate the measures, and therefore will be considered for compliance determination. Note there are some items in this table that are required to calculate the quality measure and are also used for risk adjustment (RA) in one or more of the quality measures. Please refer to the footnotes for more information.
- **Table 2** includes only the items used for risk adjustment that are **not** included in Table 1.

For detailed measure specifications, please refer to the IRF Quality Measures User's Manual:

Footnotes:

RA (Risk Adjustor) = quality measure also uses this item for risk adjustment

* At least one discharge goal is required for one of the GG0130 - Self-Care or GG0170 - Mobility items on the Admission assessment to fulfill requirements of the IRF QRP.

** For patients with Incomplete Stays (e.g., unplanned discharge), collection of discharge functional status might not be feasible. Therefore, only two criteria are required for APU determination: (i) complete admission functional assessment data on the Admission assessment, and (ii) a discharge goal for at least one self-care or mobility item on the Admission assessment. Incomplete patient stays include patients who died in the IRF, who were discharged to an acute hospital, psychiatric hospital, or long-term care hospital, who were discharged against medical advice, or who had an IRF length of stay of less than 3 days. For more information, please refer to the IRF Quality Measures User's Manual Version 2.0.

Note: Only items in the Quality Indicators section of the IRF-PAI are included in this table. Any additional IRF-PAI items used to calculate quality measures are required for the IRF prospective payment system and are not included in this table.

O0100N	Total Parenteral Nutrition	x		0, 1, and "-" (dash)	Not applicable, item is not used for APU determination						x		x

Notes: The items in this table are used in quality measure calculation as risk adjustors. Not reporting risk adjustor data means that the complexity of the IRF's patients is not accounted for in the quality measure scores. Only items in the Quality Indicators section of the IRF-PAI are included in this table. Any additional IRF-PAI items used to calculate quality measures are required for the IRF prospective payment system and not included here.
