

HPMS E-Mail

Date: December 20, 2016

Subject: 2017 Display Measures

The final display data have been posted in HPMS. To address the issues identified with the measure DMC24 – Hospitalization for Potentially Preventable Complications during the preview period, CMS worked with NCQA to refine the formula by adding exclusion rules to remove outlier data and optimize the data format for reporting. The exclusion rules are documented in the Technical Notes that accompany the display measure data. The values for all contracts in DMC24 have been recalculated using the final formula.

To access the display data in HPMS, from the home page navigation bar select: “Quality and Performance”, then “Performance Metrics”, then “Star Ratings and Display Measures”, then “Display Measures” and finally select 2017 in the list box. The display data will be posted publicly here:
